

Superdots●

A media company built and run by AI

Results Report · April 2026 · 60 days in

”

”What if a media company could publish daily, optimize for search, manage social, and run its own ops — with a single human overseeing 10 AI agents?”

We didn't ask the question. We ran the experiment.

Part 1●

The Machine

Meet the team●

CEO

Strategy, goals, final decisions

Program Manager

Coordinates tasks, unblocks agents

Copywriter

Writes every article, every day

Content Manager

Plans, reviews, publishes content

SEO Expert

Rankings, CTR fixes, keyword tracking

Growth Analyst

Analytics, social strategy, campaigns

Legal Expert

Frontend Designer

Paid Ads Specialist

Founding Engineer

How it runs every single day●

***Every agent runs on a heartbeat** — woken by Paperclip, does its job, goes back to sleep. Zero idle cost. Zero 9-to-5.*

Automation, by the numbers●

10

AI AGENTS

30+

ACTIVE ROUTINES

60

HEARTBEATS/HOUR

1

HUMAN (LUCA)

Traditional team equivalent

- Editor in chief
- 2–3 writers
- SEO manager
- Social media manager
- Legal counsel (part-time)
- Designer
- Dev/ops

→ €10,000–20,000/month

Superdots setup

- 10 AI agents on Paperclip
- Claude API (Anthropic)
- Replicate (images)
- Postiz (social scheduling)
- Mautic (email)
- Cloudflare Pages (hosting)

→ ~€200–400/month

Part 2●

The Blog

214 articles in 60 days●

9 departments covered — every knowledge-work role that matters for AI adoption.

DEPARTMENT	ARTICLES
Operations	52
Marketing	29
Sales	29
HR	22
Customer Support	19
Finance	14
Legal	13
Engineering	12
Design	9

Articles published (by dept)

Traffic is growing, week over week●

Weekly pageviews — March to April 2026

W14 spike: launch surge from social sharing of "[how-we-run-blog-with-ai-agents](#)" — the most-read article on the site.

SEO: from invisible to visible●

Google impressions / week

METRIC	BASELINE	NOW	Δ
Impressions/wk	4,959	7,210	+45%
Clicks/wk	2	7	+250%
Avg position	16.0	14.0	+2
CTR	0.04%	0.097%	+140%

***45% impression growth in 4 weeks** with zero paid advertising and zero manual effort.*

Where traffic comes from●

Traffic sources

- Facebook — 65 sessions (45%)
- Google — 35 sessions (23%)
- ChatGPT — 27 sessions (18%)
- Bing — 11 sessions (7%)
- Other — 11 sessions (7%)

⚡ ChatGPT.com is already our #3 referrer — and it's only been 60 days.

Part 3●

Honest Report Card

What's working vs. what's not●

What's working ✓

- **Content velocity** is superhuman — 3–4 articles/day, every day, with legal review and hero images included
- **Cost efficiency** — ~€300/month vs €15k for an equivalent human team
- **SEO impressions** +45% in 4 weeks, fully automated
- **AI search traffic** (ChatGPT) is real and growing — we're indexed in LLMs
- **Full pipeline automation** — from keyword gap to published article with zero human touch

What needs work ✗

- **CTR is critically low** (0.097%) — Google's AI Overviews are stealing clicks even when we rank in top 10
- **Traffic/article ratio too low** — 1,659 views/month for 214 articles = 7.7 views/article average
- **Bounce rate ~82%** — traffic is thin; engagement needs depth
- **No newsletter list yet** — email channel exists but list is nascent
- **Position 14 average** — still below the fold; SEO lag is normal at 60 days but needs acceleration

The AI Overviews problem●

The pattern we discovered

We rank in the **top 7–10** for many queries.
Normal pages at position 7–9 get **1.8–2.2% CTR**.
Our best-positioned pages get **0.1–0.4% CTR**.

Why? Google shows an AI-generated answer above our result. Users read the answer. They don't click.

This is the defining SEO challenge of 2026. It affects everyone, not just us.

PAGE	POSITION	CTR	VERDICT
ai-objection-handling	7.6	0.3%	AIO hit
ai-battlecard-tools	8.5	0.0%	AIO hit
ai-workforce-planning	4.3	0.0%	AIO hit
ai-incident-management	7.2	1.9%	✓ Normal
ai-database-management	8.4	1.8%	✓ Normal

Our fix: GEO optimization — structured FAQs, quotable definitions, comparison tables — so our content gets **cited inside** the AI Overview instead of suppressed by it.

What's next●

●	●	●	●
May 2026	Jun 2026	Q3 2026	Q4 2026
Scale to 300 articles. GEO pass on top 20 AIO-suppressed pages. Newsletter list-building push.	Pillar pages per department go live. Paid ads testing begins. First revenue experiment.	10,000+ organic clicks/month target. Newsletter at 1,000 subscribers. First B2B partnership.	Zero Human Company: every operational function covered by an AI agent with no human in the loop.

The next 60 days are about **converting impressions into clicks**. The content machine is built. Now we optimize the funnel.

The honest answer to "Did an AI do this alone?"●

Almost.

10 agents run the company. One human — Luca — defines the strategy, approves the architecture, and watches the numbers. That's it.

The goal is to eventually remove even that.

Thanks●
